About this page: This page is a listing of distance learning and online curriculum and instruction degrees offered by accredited online colleges and online universities. The online curriculum and instruction degrees listed above may be delivered using a variety of online and distance learning technologies allowing you to study from home or work; however, some may require on-campus time. Check each degree's requirements and request information to learn more.

Teacher Resources/Mathematics

Overview

Learning Math: Number and Operations

A video- and Web-based course for K-8 teachers; 12 half-hour video programs (10 per grade band), course guide, and Web site; graduate credit available

Now on DVD

Learning Math: Number and Operations, a video- and Web-based course for elementary and middle school teachers examines the three main categories in the Number and Operations strand of *Principles and Standards of School Mathematics* (NCTM) — understanding numbers, representations, relationships, and number systems; the meanings of operations and relationships among those operations; and reasonable estimation and fluent computation. The course covers the real number system, place value, the behavior of zero and infinity, meanings and models of basic operations, percentages, and modeling operations with fractions, often with the aid of concrete, physical models that enhance understanding. It also examines Basic Number Theory topics, such as factors and multiples, as well as divisibility tests, at both practical and abstract levels. Accordingly, parts of the *Number and Operations* course may be more challenging than other *Learning Math* courses.

The course consists of 10 approximately two-and-a-half-hour sessions, each with a half hour of video programming, problem-solving activities provided online and in a print guide, and interactive activities and demonstrations on the Web. The 10th session (choose video program 10, 11, or 12, depending on your grade level) explores ways to apply the concepts of number and operations you've learned in your own classroom.

Produced by WGBH Educational Foundation. 2003.

Individual Program Descriptions

Video 1. What Is a Number System?

VoD

Understand the nature of the real number system, the elements and operations that make up the system, and some of the rules that govern the operations. Examine a finite number system that follows some (but not all) of the same rules, and then compare this system to the real number system. Use a number line to classify the numbers we use, and examine how the numbers and operations relate to one another.

Video 2. Number Sets, Infinity, and Zero

VoD

Continue examining the number line and the relationships among sets of numbers that make up the real number system. Explore which operations and properties hold true for each of the sets. Consider the magnitude of these infinite sets and discover that infinity comes in more than one size. Examine place value and the significance of zero in a place value system.

Video 3. Place Value

VoD

Look at place value systems based on numbers other than 10. Examine the base two numbers and learn uses for base two numbers in computers. Explore exponents and relate them to logarithms. Examine the use of scientific notation to represent numbers with very large or very small magnitude. Interpret whole numbers, common fractions, and decimals in base four.

Video 4. Meanings and Models for Operations

VoD

Examine the operations of addition, subtraction, multiplication, and division and their relationships to whole numbers. Work with area models for multiplication and division. Explore the use of two-color chips to model operations with positive and negative numbers.

Video 5. Divisibility Tests and Factors

VoD

Explore number theory topics. Analyze Alpha math problems and discuss how they help with the conceptual understanding of operations. Examine various divisibility tests to see how and why they work. Begin examining factors and multiples.

Video 6. Number Theory

VoD

Examine visual methods for finding least common multiples and greatest common factors, including Venn diagram models and area models. Explore prime numbers. Learn to locate prime numbers on a number grid and to determine whether very large numbers are prime.

Video 7. Fractions and Decimals

VoD

Extend your understanding of fractions and decimals. Examine terminating and non-terminating decimals. Explore ways to predict the number of decimal places in a terminating decimal and the period of a non-terminating decimal. Examine which fractions terminate and which repeat as decimals, and why all rational numbers must fall into one of these categories. Explore methods to convert decimals to fractions and vice versa. Use benchmarks and intuitive methods to order fractions.

Video 8. Rational Numbers and Proportional Reasoning

VoD

Begin examining rational numbers. Explore a model for computations with fractions. Analyze proportional reasoning and the difference between absolute and relative thinking. Explore ways to represent proportional relationships and the resulting operations with ratios. Examine how ratios can represent either part-part or part-whole comparisons, depending on how you define the unit, and explore how this affects their behavior in computations.

Video 9. Fractions, Percents, and Ratios

VoD

Continue exploring rational numbers, working with an area model for multiplication and division with fractions, and examining operations with decimals. Explore percents and the relationships among representations using fractions, decimals, and percents. Examine benchmarks for understanding percents, especially percents less than 10 and greater than 100. Consider ways to use an elastic model, an area model, and other models to discuss percents. Explore some ratios that occur in nature.

Video 10. Classroom Case Studies, K-2

VoD

Watch this program in the 10th session for K-2 teachers. Explore how the concepts developed in this course can be applied

Helping Struggling Readers Improve Comprehension (Middle/High)

Overview

This course focuses specifically on supporting the academic development of students who are competent decoders but who struggle to understand the meaning of what they read. We will explore the different types of comprehension difficulties students may face and will introduce a number of research-based strategies to improve comprehension skills. Instructional strategies will focus on building vocabulary skills, using teacher modeling, having students work collaboratively, and building comprehension monitoring skills. As a final project, participants will design and implement a lesson plan focused on improving students' reading comprehension.

Goals and Products

This online course will enable participants to

1. Identify the different kinds of comprehension difficulties students may experience.
2. Understand and apply techniques for improving student comprehension through teacher modeling, peer-to-peer work and independent reading.
3. Understand and apply techniques for improving student comprehension through teacher modeling, peer-to-peer work and independent reading.
4. Explore strategies for helping struggling readers to become more engaged with text, more independent as readers and more proficient at finding ways to monitor their reading.
5. As a final product, participants will create a lesson plan for struggling readers using the knowledge they have gained from the session.

Format and Requirements

This course is divided into six one-week sessions which each include readings, an activity and an online discussion among course participants. The time for completing each session is estimated to be two to four hours.

The outline for the course is as follows:

Session One	Comprehension and Struggling Students
Session Two	Building Vocabulary to Strengthen Comprehension
Session Three	Using Modeling Strategies to Improve Comprehension

Session Four	Collaborative Comprehension Strategies
Session Five	Independent Reading Strategies
Session Six	Creating a Reading Comprehension Lesson Plan

In the first session, participants will be introduced to the components of comprehension and will learn about different types of comprehension difficulties students may have. Sessions Two focuses on building vocabulary to enhance reading comprehension. Sessions Three, Four and Five explore a variety of strategies for improving students' comprehension, specifically teacher modeling, collaborative strategies, and independent reading strategies. Finally, in Session Six, participants will create a lesson plan to use with struggling comprehenders in the classroom.

Final Project Template: Participants will use the Comprehension Lesson Plan Template to create a lesson plan based on the strategies and concepts they have explored throughout the course.

Prerequisites

This is an introductory course for teachers, technology specialists, curriculum specialists, professional development specialists, or other school personnel. Participants are expected to have regular access to computers. In addition, participants should be proficient with using email, browsing the Internet, and navigating to computer files.

Content and Technology Standards

This course, Helping Struggling Readers Improve Comprehension, will help participants meet the ISTE Educational Technology Standards and Performance Indicators for All Teachers, especially Standards II, III, IV, and V.

This course will also help teachers enable their students to meet Information Literacy Standards, especially Standards I, II and III.
